

YOUR TD SCREENING

Quick, Private, and Important for Your Care

Completing TDScreen is an important step in protecting your health. This quick, 5-minute video screening helps catch early signs of tardive dyskinesia (TD) so you can stay ahead of symptoms and protect your health.

What is TDScreen?

- A quick, video-based tool that checks for signs of TD.
- Takes less than 5 minutes on your own device, no app or login needed.
- Uses AI technology to generate a simple risk score for your provider.

What Is TD (Tardive Dyskinesia)?

- A condition that can cause involuntary movements of the face, mouth, hands, or body.
- It may appear after long-term use of certain medications.
- Early detection helps your provider adjust care if needed.
- Common signs include: lip smacking, tongue movements, grimacing, or jerky hand and arm movements.

How It Works

1. When it's time, you'll get a text message with a secure link to start your screening.
2. You'll complete a short video assessment on your phone or device; it takes just a few minutes.
3. TDScreen analyzes your movements and creates a simple risk score for TD.
4. Your provider reviews your results and, if needed, may schedule a more detailed in-person check.

Why take TDScreen?

- TD symptoms can be subtle at first. Screening helps catch them early.
- Results give your provider valuable information to guide treatment.
- Even if no signs are found, you and your provider can feel confident about your care.

Safe, Simple, and Free

- Your results are confidential and shared only with your care team.
- All screenings meet strict healthcare privacy standards.
- There is no cost to you for using TDScreen.
- Your provider will let you know if and when to repeat the screening to stay on top of your care.
